ANAMBRA 2025

FORENSIC POST-ELECTION AUDIT

Governorship election

Conducted under the Athena Post-Election Audit Framework (APAF), Version 4

5,720 polling units · 326 wards · 21 LGAs

BVAS → EC8A → EC8B → EC8C → EC8D

Each dot is one polling unit. Gold dots mark the 368 non-compliant units (arrangement illustrative). © 2026 Athena Centre for Policy and Leadership

THE ANSWER

What did we find?

93.5%

of assessable polling units complied with APEA's forensic integrity tests

5,305 of 5,673 assessable polling units, under published APAF rules.

APEA ELECTION INTEGRITY ASSESSMENT

Adequate Integrity — Improvement Required

Assessed on incidence, severity, type, concentration and evidence quality. Outcome materiality is reported separately.

5,720

Polling units audited

100% coverage

5,673

Assessable

99.2% of all PUs

5,305

Compliant

93.5% of assessable PUs

368

Non-compliant

6.5% of assessable PUs

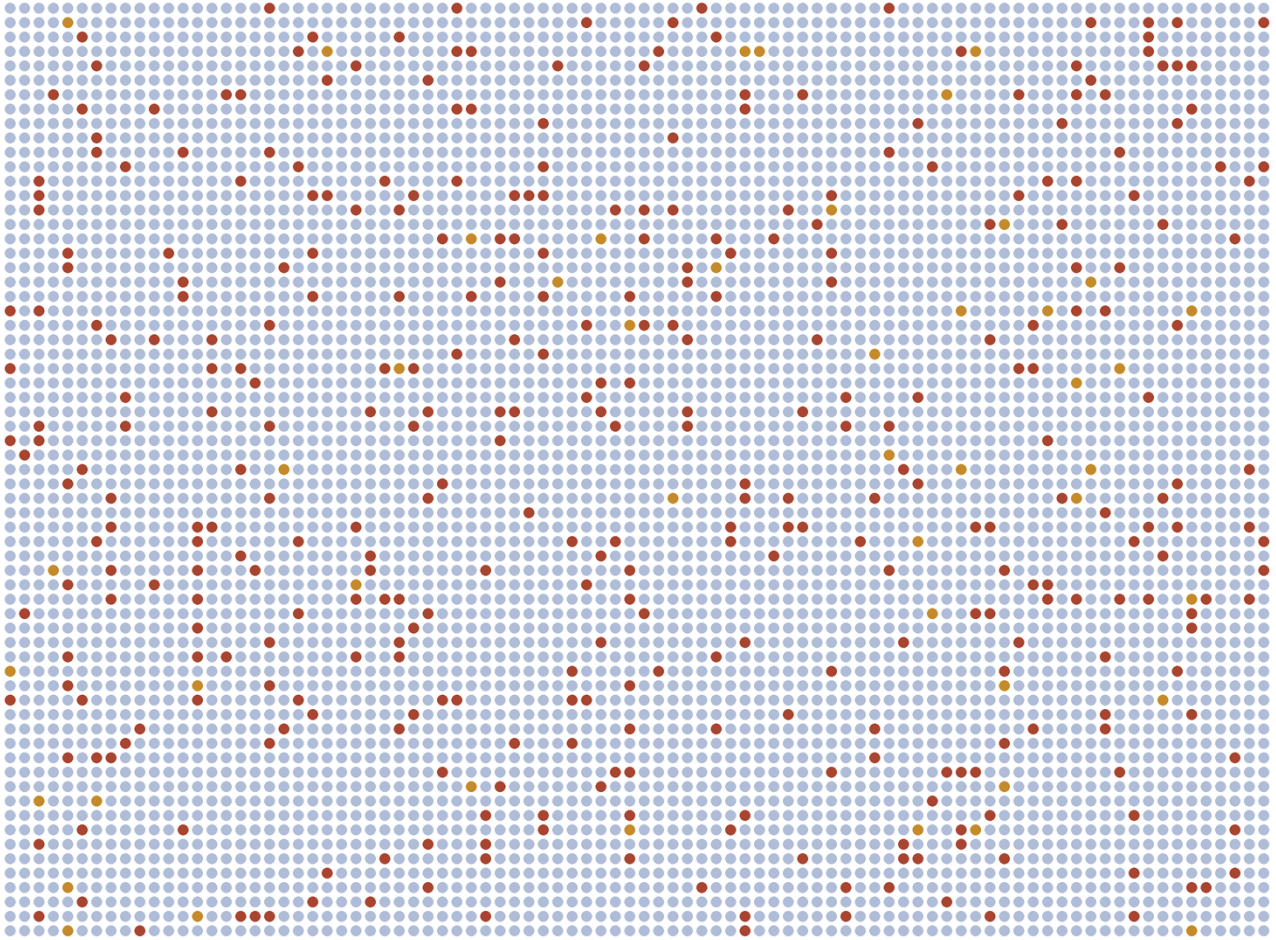

47

Excluded

0.8% of all PUs

APEA is an electoral integrity audit, not a judicial determination. Compliance classifications are analytical findings under published APAF rules.

Most polling units passed. Important failures remained — and they were not evenly distributed.

Each dot is one polling unit (5,720). Arrangement is illustrative, not geographic.

- **5,305 compliant** 93.5% of assessable PUs
- **368 non-compliant** 6.5% of assessable PUs
- **47 excluded** 0.8% of all PUs

278

of 4,918 clean-base PUs

5.7% had a party-vote alteration between EC8A and EC8B

401

of 5,720 PUs

7.0% were still over-voted at EC8B

48

of 326 wards

14.7% failed EC8B → EC8C total reconciliation

21

of 21 LGAs

100% of LGA totals ultimately reconciled to the declaration

Did the identified problems approach the declared outcome?

323,219

Declared winning margin · APGA 422,664 vs APC 99,445

45,102

Votes recorded in all 368 non-compliant polling units

14.0% of the margin

"The identified discrepancies do not approach the declared margin under APEA's quantitative materiality test."

Process integrity and outcome materiality are different questions. APGA also cleared the 25% constitutional spread in 21 / 21 LGAs (14 required).

Non-compliance was concentrated: Ogbaru alone held 19.8% of it.

73 / 368

non-compliant PUs in Ogbaru

19.8% of all statewide non-compliance

151 / 368

in the top three LGAs

41.0% — Ogbaru 73, Idemili South 41, Onitsha North 37

A local failure is not the whole election; a small statewide rate does not erase where the failures sit.

ANAMBRA NORTH 93 non-compliant PUs

Anambra West	Anambra East	Ayamelum	Oyi	Onitsha North	Onitsha South
7	11	3	21	37	14

ANAMBRA CENTRAL 112 non-compliant PUs

Awka North	Dunukofia	Njikoka	Anaocha	Awka South	Idemili North	Idemili South
6	7	19	4	18	17	41

ANAMBRA SOUTH 163 non-compliant PUs

Ogbaru	Ekwusigo	Ihiala	Nnewi North	Nnewi South	Aguata	Orumba North	Orumba South
73	6	13	12	13	14	10	22

Schematic tile map grouped by senatorial zone; not to scale. Shading = number of non-compliant PUs. Counts, not rates — LGAs differ in size. A boundary map will replace this on the web.

Four dimensions, each with one principal finding — and no invented score.

01

Technology & Evidence Integrity

99.84%

5,711 / 5,720 EC8As uploaded to IReV

- BVAS records: 5,720 / 5,720
- BVAS = EC8A accreditation: 95.9%
- Usable uploads: 5,698 / 5,711

02

Polling-Unit Compliance

93.5%

5,305 / 5,673 assessable PUs compliant

- 802 / 5,720 over-voted at EC8A (14.0%)
- EC8A party votes = valid: 100%
- Ballot accounting: not assessable

03

Collation Integrity

48 / 326

wards failed EC8B → EC8C total reconciliation (14.7%)

- 278 / 4,918 clean-base PUs altered
- 12 / 21 LGAs fail party reconciliation
- 21 / 21 LGA totals reconcile

04

Outcome Materiality

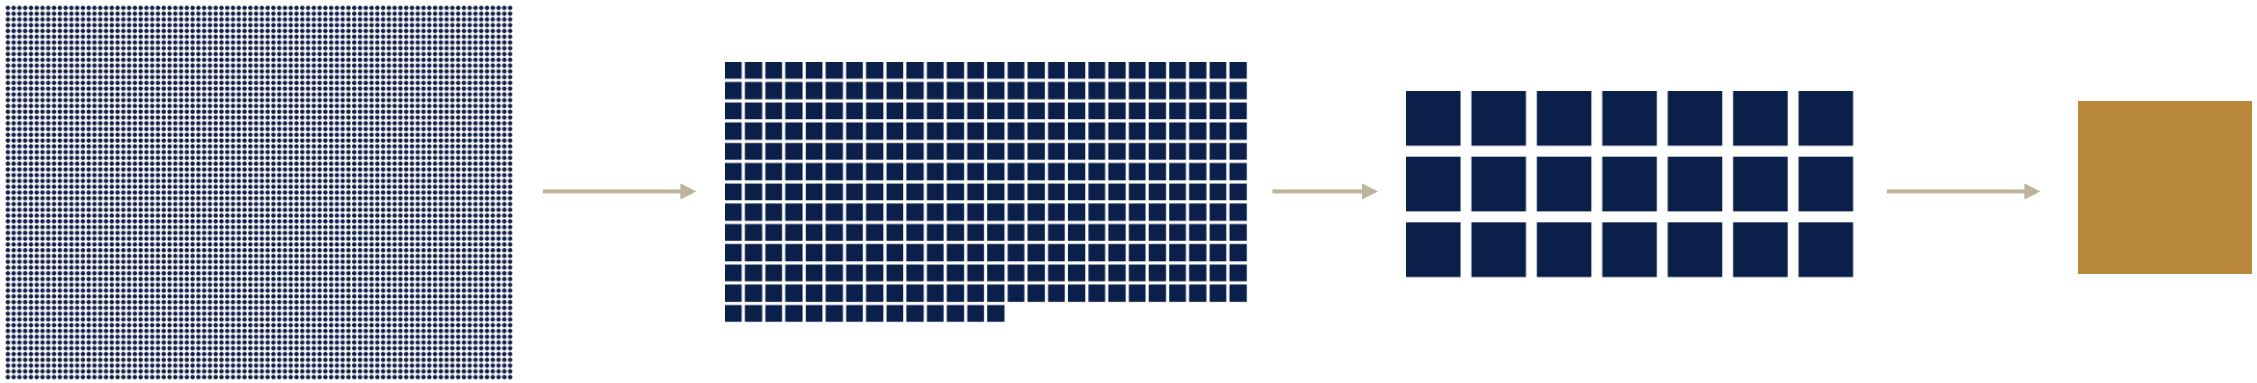

14.0%

45,102 votes in non-compliant PUs vs a 323,219 margin

- APGA ≥25% in 21 / 21 LGAs
- Reported separately from process integrity

Dimensions 01–03 inform the process-integrity assessment. Outcome Materiality stays visible on its own.

We did not sample the election. We reconstructed it.

BVAS · EC8A

326

wards

EC8B ward collation

21

LGAs

EC8C LGA collation

1

state declaration

EC8D · EC8E

BVAS → EC8A → EC8B → EC8C → EC8D

All 5,720 polling units tested; 5,673 carried a usable result.

Discrepancies in the chain, totals that reconcile — and a margin the discrepancies do not approach.

21 / 21

Do the declared totals reconcile through the chain?

All 21 LGA total-vote figures reconcile to the declaration (APGA 422,664 votes, 72.4% of valid votes, margin 323,219). Party-level reconciliation holds in only 9 / 21 LGAs.

802 → 401

Was there statutory over-voting?

802 / 5,720 PUs (14.0%) exceeded BVAS accreditation at EC8A (13,969 excess votes); 401 remained over-voted at EC8B. A unit-level statutory failure.

48 / 326

Did the collation chain preserve polling-unit results?

48 wards (14.7%) fail EC8B → EC8C total reconciliation, and 278 clean-base PUs show party-vote change with no documented basis (7,784 votes moved).

14.0%

Do the identified discrepancies approach the declared margin?

The 45,102 votes in the 368 non-compliant PUs equal 14.0% of the 323,219 margin — they do not approach it under APEA's quantitative materiality test. APGA also cleared the 25% spread in 21 / 21 LGAs.

THE EVIDENCE CHAIN

A declaration can balance perfectly while the discrepancies are already inside it.

BVAS

ACCREDITATION

The independent ceiling: how many voters were accredited. Votes cast cannot lawfully exceed it.

EC8A

POLLING-UNIT RESULT

The result recorded at the unit, on the day.

EC8B

WARD COLLATION

EC8A results collated to ward level — the first point at which figures can move.

EC8C

LGA COLLATION

Ward figures collated to the LGA.

EC8D

STATE COLLATION

LGA figures aggregated to the state declaration.

THE CENTRAL INSTITUTIONAL INSIGHT

A final declaration can reconcile while discrepancies entered the result at an earlier collation stage. That is why APEA follows the chain link by link, with BVAS as the fixed anchor.

Net movement was small. The movements underneath were not.

APGA

declared winner

NET +695

EC8A	EC8B	EC8C	EC8D
421,969	→ 422,029 (+60)	→ 418,018 (−4,011)	→ 422,664 (+4,646)

Idemili North dips −6,211 at EC8C and recovers +6,001 at EC8D; Orumba North / South are transposed at EC8D.

APC

NET −2,315

EC8A	EC8B	EC8C	EC8D
101,760	→ 99,778 (−1,982)	→ 100,232 (+454)	→ 99,445 (−787)

Anaocha −1,917 at EC8A→EC8B is the single largest move. Net erosion through the chain.

YPP

NET −673

EC8A	EC8B	EC8C	EC8D
38,426	→ 37,538 (−888)	→ 37,859 (+321)	→ 37,753 (−106)

Anambra East −247 and Oyi −120 are the largest moves — small and dispersed.

48

of 326 wards did not reconcile

14.7% failed total-vote reconciliation between EC8B (the sum of their polling units) and EC8C (the ward figure).

Yet all **21 / 21** LGA totals reconcile into the state declaration — the final number adds up.

98,520 → 105,919

votes in those 48 wards, EC8B vs EC8C — a net difference of +7,399

WHAT WE FOUND

Forty-eight of 326 wards do not reconcile on total votes between ward result and LGA collation. Every one of the 21 LGA totals reconciles.

WHY IT MATTERS

Comparing only final totals would show a perfect balance. The reconstruction shows figures moved at an earlier stage and were carried into a declaration that still adds up.

WHAT WE CANNOT CONCLUDE

Numerical evidence alone does not establish why the figures moved, or by whom. No documentary explanation was held for these wards.

Accreditation and transmission held up. Collation did not hold as well.

86.0%

Not over-voted at EC8B
93.0%

No unexplained alteration
95.1%

Share of tested records or units that passed. Navy = passed; tint = failed. Full indicator tables are in Layer 3.

Most EC8A over-voting was reconciled by EC8B — and part of it was carried through.

SECTION 51(2) · ZERO TOLERANCE

802 over-voted at EC8A — 13,969 excess votes over BVAS

455
reconciled
no longer over-voted; no correction record held

331
transferred
still over-voted at EC8B

16
cancelled

331 transferred + **70** new at EC8B

= 401 over-voted at EC8B (8,357 excess votes)

802 / 5,720

over-voted at EC8A — 14.0% of polling units

401 / 5,720

over-voted at EC8B — 7.0% of polling units

70

newly introduced at EC8B on units clean at EC8A: +3,812 votes above BVAS

Legal status and forensic integrity are reported separately. The ±5 band never applies to the legal test.

278

clean-base polling units

A party's figure changed between EC8A and EC8B by more than ±5 votes, with no documented basis. 278 / 4,918 clean-base PUs — 5.7%. 7,784 votes moved between parties.

Balanced swaps are caught: valid votes are recomputed from the party sum.

CLEAN-BASE PARTY VOTES · EC8A → EC8B

APGA	349,553 → 352,369	**+2,816**
APC	81,352 → 82,564	**+1,212**
YPP	30,471 → 30,608	**+137**

WHAT WE FOUND

Party figures changed beyond ±5 in 278 clean-base PUs (7,784 votes moved).

WHY IT MATTERS

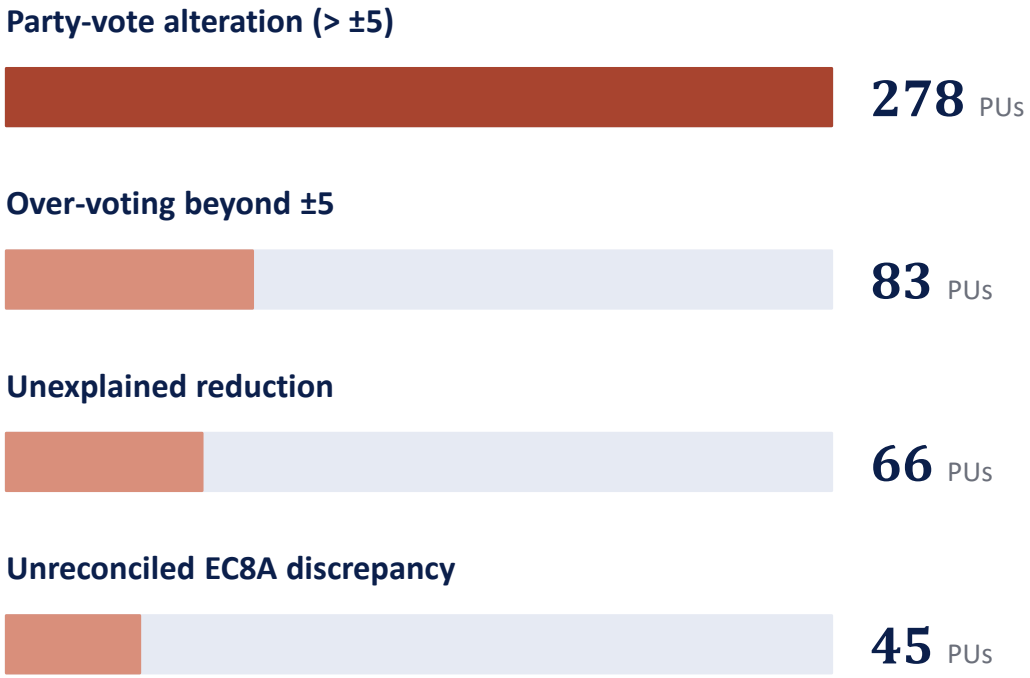

The 802 PUs already over-voted at EC8A were removed first, where a change could be a documented or reconciled correction. On a clean unit there was nothing to correct.

WHAT WE CANNOT CONCLUDE

Numerical evidence alone does not establish intent, coordination or criminal conduct.

The 368 were driven by changes in composition, not raw over-voting — and Ogbaru led.

TRIGGERS ACROSS ALL 368 NON-COMPLIANT PUs

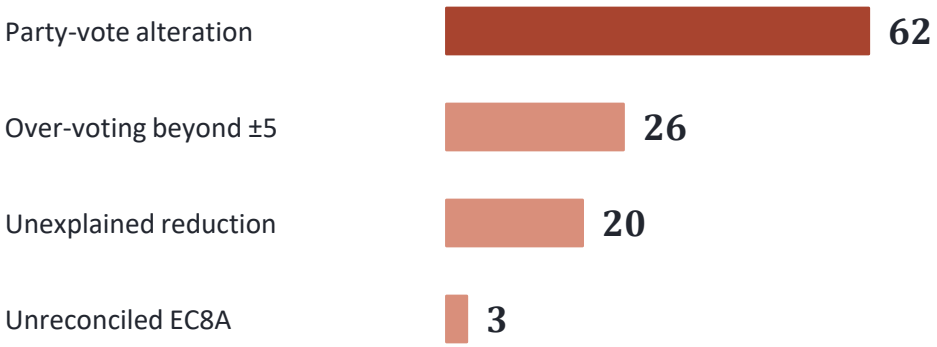

A PU can carry more than one trigger, so the four sum to 472. The result was more often changed in composition — who the votes went to — than inflated in volume.

GEOGRAPHIC CONCENTRATION · OGBARU

73 / 368

non-compliant PUs — 19.8% of the state total, rank 1 of 21

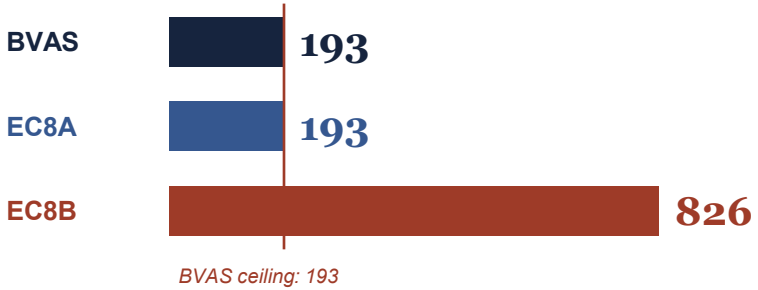

2,194 votes moved between parties in Ogbaru — the most of any LGA. Concentration does not itself establish intent.

FORENSIC CASES

Three cases, traced form by form.

UNEXPLAINED INFLATION · 70 PUs · +3,812 VOTES

Ubahumonum P/S, Okija V (Ihiala)

APGA 151 → 748 between EC8A and EC8B. EC8A total sits exactly at BVAS (193); EC8B runs 633 above it.

70

polling units where over-voting first appears at EC8B, on units within BVAS at EC8A — 1.2% of 5,720, adding +3,812 votes above BVAS.

UNEXPLAINED REDUCTION

66

PUs · −3,202 votes

A legal pass — yet valid votes fall between forms with no recorded basis.

ST. VINCENT (IYIOWA)

TRANSFERRED OVER-VOTING

331

PUs · 4,863 excess votes

Over-voted at EC8A and still over-voted at EC8B.

ODEKPE I (IYIOWA)

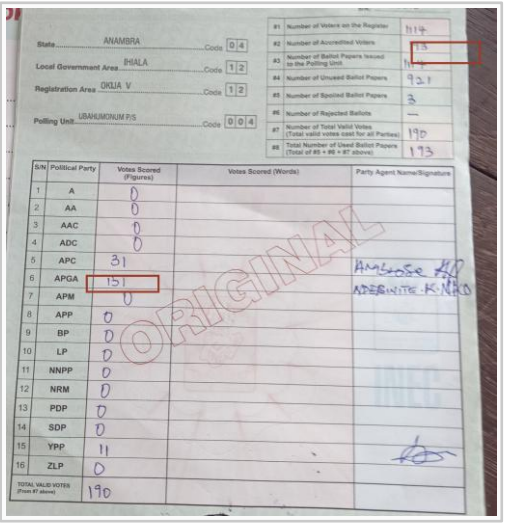

See the evidence yourself.

BVAS	EC8A	EC8B
193	→ 193	→ 826

APGA 151 → 748 between EC8A and EC8B. The EC8B total of 826 exceeds the BVAS accreditation of 193.

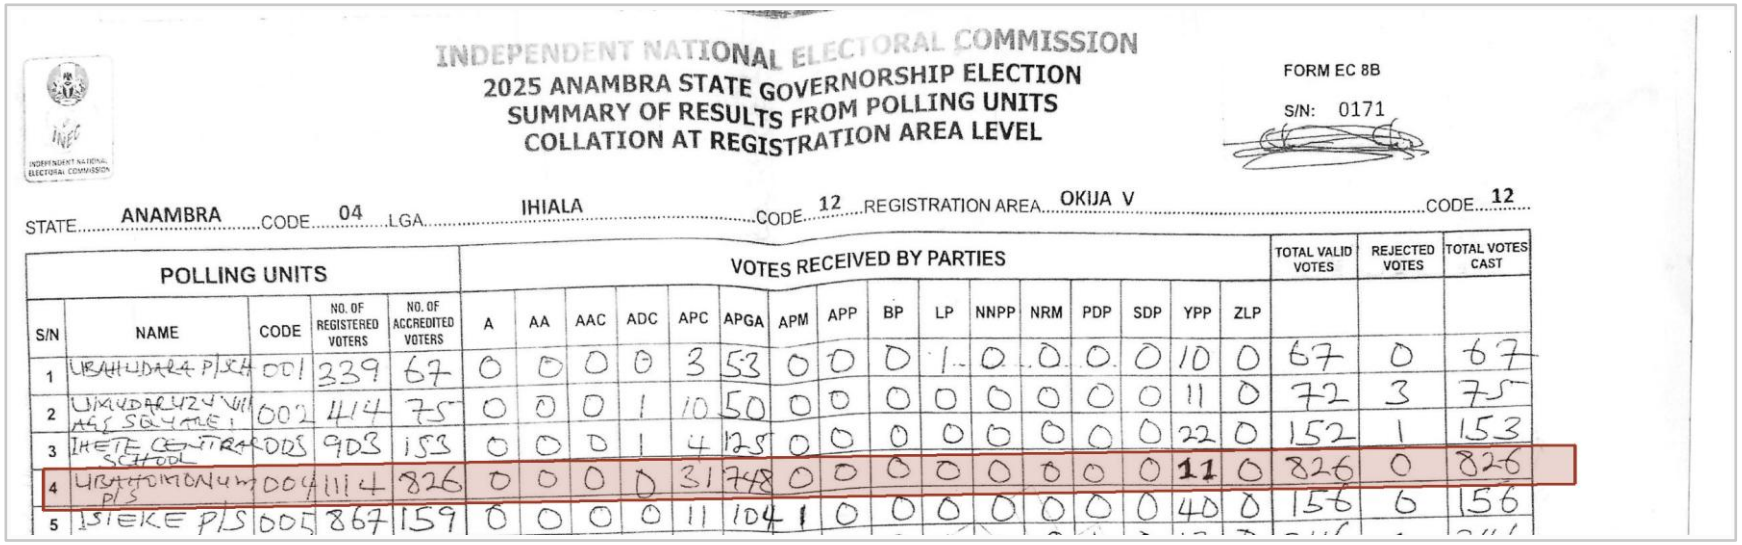

EC8B does not reconcile: its party votes sum to 790, but the form records 826 total — 36 votes, over and above the 633 inflated past BVAS, attributed to no party.

Every figure on this page can be checked against the forms above.

Every record we expected — and what we did and did not obtain.

RECORD	OBTAINED / COVERAGE	STATUS	NOTE
Polling units expected	5,720	**Complete**	21 LGAs and 326 wards represented
BVAS accreditation	5,720 / 5,720 (100%)	**Complete**	Accreditation baseline for every PU
EC8A (IReV)	5,711 / 5,720 (99.84%)	**Near-complete**	9 not uploaded; 13 uploads with missing values
EC8B ward collation	5,673 / 5,720 (99.2%)	**Near-complete**	47 PUs have no usable EC8B result (excluded)
EC8C / EC8D	326 wards · 21 LGAs	**Complete**	Higher-level reconciliation fully testable
EC8E declaration	Obtained	**Complete**	The declared result the audit tests against
EC40G cancellation records	0 received	**Required evidence unavailable**	No cancellation form available to verify treatment
Issued / spoilt / unused ballots	Not collated	**Not assessable**	Pillar 2 ballot accounting cannot be tested

Three states are kept distinct: Not Applicable (the test does not apply) · Not Assessable (an evidence limitation) · Required evidence unavailable (an expected authoritative record cannot be obtained).

Make every change between forms explainable, documented and auditable.

1	**Strengthen EC8A–EC8B reconciliation**	Automatically flag changes in party votes and require documented justification before results proceed through collation.
2	**Prevent new over-voting at collation**	EC8B must not introduce votes above the BVAS ceiling without documented resolution.
3	**Enforce reconciliation across levels**	Require EC8B → EC8C → EC8D totals to reconcile before results advance.
4	**Create an auditable correction trail**	Preserve the original figure, corrected figure, reason, evidence and authorising official for every correction.
5	**Improve ward-level transparency**	Make EC8B results and reconciliation records publicly accessible for independent reconstruction.

To courts, political parties, observers and development partners: see Layer 3.

EVERY ELECTION LEAVES AN EVIDENCE TRAIL.

APEA follows it.

EXPLORE THE EVIDENCE

LGA and ward analysis

Underlying evidence

Methodology

Downloadable data

The presentation ends. The evidence does not.

APEA is an electoral integrity audit, not a judicial determination. APEA assesses electoral records against published forensic and administrative indicators. Its classifications of compliance, integrity and quantitative materiality are analytical findings and do not determine the legal validity of an election. Questions concerning the legal consequences of non-compliance are matters for the appropriate Election Tribunal or Court.

J Distribution by LGA

Standard of proof: what this audit is — and what it is not.

SCOPE	Assesses what BVAS, EC8A, EC8B, EC8C and EC8D can and cannot substantiate. It does not allege intent, coordination or criminal conduct by any person or party.
STANDARD OF PROOF	A numerical fact is reported as such; the administrative reason for a change is reported only where a record supports it.
STATISTICS	A significance test says a pattern is inconsistent with chance at a stated level. It never infers why a pattern occurred.
ABSENCE OF EVIDENCE	Where evidence is insufficient the matter is not assessable. Absence of evidence is never treated as evidence of compliance.

AEO establishes and interprets the empirical record. Courts determine its legal consequences.

Key terms

TERM	MEANING IN THIS REPORT
Polling Unit (PU)	The base voting location, where every verdict is first formed. Anambra has 5,720.
BVAS	Bimodal Voter Accreditation System — the electronic record of accredited voters; the independent ceiling for votes cast.
EC8A / EC8B	The polling-unit result (EC8A) and its ward-level collation (EC8B).
EC8C / EC8D	The LGA collation (EC8C, listing ward figures) and the state collation (EC8D, listing LGA figures). EC8E is the declaration.
Legal over-voting	Votes cast exceed accredited voters (s.51(2), Electoral Act 2026). Zero tolerance — a single excess vote fails.
±5 material band	A five-vote clerical tolerance for arithmetic and the compliance verdict — never for the legal over-voting count.
Dual verdict	Each PU carries a legal status (over-voting) and a forensic-integrity status (what changed at collation).
Clean base	PUs not over-voted at EC8A (4,918). With no over-vote to correct, any later change invites scrutiny.
Party-vote alteration	A party's figure changes between EC8A and EC8B beyond ±5, whether or not the total is preserved.
Documented / reconciled / unexplained	Documented: supported by an authoritative record. Reconciled: repaired and arithmetically consistent, no record held. Unexplained: basis cannot be identified.
Compliant / Non-compliant / Excluded	The forensic compliance verdict under published APAF rules. Excluded PUs have no usable result and are counted separately.

Methodology & statistical note

BASELINE

BVAS accreditation is the ceiling for votes cast (s.51(2), Electoral Act 2026; supported by s.62(5)). A result with zero or blank BVAS is treated as over-voted, not ‘not assessable’.

TOLERANCES

Over-voting is zero-tolerance at every stage. The ±5 band applies only to arithmetic reconciliation, party-vote magnitude and the compliance verdict.

SIGNIFICANCE TEST

Exact two-sided binomial sign test on the direction of non-zero party changes between EC8A and EC8B on the clean base (802 over-voted units excluded). Null p = 0.5; ±5 ties excluded; thresholds adjusted for several parties. Wording states inconsistency with an equal-direction null — never non-randomness or intent. PUs are clustered within wards and LGAs; the test treats them as independent, so clustering is reported alongside.

REPRODUCIBILITY

Every figure traces to one locked control dataset; matching is by ward and LGA code, not by name.

Pillars 1–3: accreditation, ballot accounting and transmission

PILLAR 1 · ACCREDITATION INTEGRITY

BVAS = EC8A accreditation P1.1

5,486 / 5,720 **95.9%**

EC8A = EC8B accreditation P1.2

5,502 / 5,720 **96.2%**

BVAS = EC8B accreditation P1.3

5,584 / 5,720 **97.6%**

A minority of units drift between the BVAS record and the result forms.

PILLAR 3 · TRANSMISSION & IREV INTEGRITY

EC8A uploaded to IReV P3.1

5,711 / 5,720 **99.8%**

Uploaded EC8A usable for audit P3.2

5,698 / 5,711 **99.8%**

Results with a verifiable BVAS record P3.3

5,720 / 5,720 **100.0%**

Nine results were not uploaded and thirteen carried missing values.

PILLAR 2 · BALLOT ACCOUNTING INTEGRITY

NOT ASSESSABLE

Issued, spoilt and unused-ballot columns were not collated, so P2.1 and P2.2 cannot be performed. Reported as an evidence limitation — never assumed compliant.

Pillar 4: each form adds up; the figures do not all survive the climb.

WITHIN AND BETWEEN POLLING-UNIT FORMS

EC8A party votes = valid votes P4.1

5,720 / 5,720 **100.0%**

EC8B party votes = valid votes P4.2

5,533 / 5,720 **96.7%**

EC8B valid + rejected = recorded total P4.3

5,651 / 5,720 **98.8%**

EC8A → EC8B party votes reconcile P4.4

5,442 / 5,720 **95.1%**

UP THE COLLATION CHAIN

Ward totals reconcile, EC8B → EC8C P4.5a

278 / 326 **85.3%**

LGA totals reconcile, EC8C → EC8D P4.5b

21 / 21 **100.0%**

Ward party votes reconcile, EC8B → EC8C P4.6

218 / 326 **66.9%**

LGA party votes reconcile, EC8C → EC8D P4.6

9 / 21 **42.9%**

READING

Totals reconcile at the LGA step, but party figures move: 108 / 326 wards and 12 / 21 LGAs fail party-vote reconciliation. On clean PUs the top three parties each gain slightly from EC8A to EC8B (APGA +2,816, APC +1,212, YPP +137).

Pillar 5: result-correction and compliance indicators

Within BVAS at EC8A (legal test, zero tolerance) P5.1

4,918 / 5,720 **86.0%**

EC8A votes ≤ EC8A accredited voters P5.2

5,566 / 5,720 **97.3%**

Not over-voted at EC8B P5.3

5,319 / 5,720 **93.0%**

No unexplained party-vote alteration P5.4

5,442 / 5,720 **95.1%**

P5.5 · CANCELLATION / NO-POLL TREATMENT

Required evidence unavailable

0 EC40G forms were received, so cancellation or no-poll treatment cannot be verified.

Only APC's direction of change departs from an equal-direction null.

PARTY	PUs GAINED	PUs LOST	NET CHANGE	n	p-VALUE
APC	83	47	+1,221	130	**0.002**
APGA	106	80	+2,893	186	0.067
YPP	41	34	+100	75	0.489
PDP	1	2	−11	3	1.00

Null: gains and losses equally likely. Changes within ±5 are excluded as ties.

Verified: each p-value was recomputed independently as an exact two-sided binomial test (APC 83 of 130; APGA 106 of 186; YPP 41 of 75; PDP 2 of 3). Unit: polling unit–party. PUs are clustered in wards and LGAs, which the test does not model.

WHAT WE FOUND

For APC, more units record gains than losses than chance would produce (p = 0.002).

WHY IT MATTERS

It marks a directional pattern worth investigating.

WHAT WE CANNOT CONCLUDE

The test does not establish why the pattern occurred, nor intent, coordination or cause.

Visible, but not scored as failures.

59

polling units under-voted

BVAS accreditation exceeded votes cast, by 2,021 votes in total. Tracked as an accreditation-to-vote gap — never a failure.

47 / 5,720

excluded polling units — 0.8%

No usable EC8B result. Shown as a visible third bucket, outside the 5,673 compliance denominator — never converted into a pass.

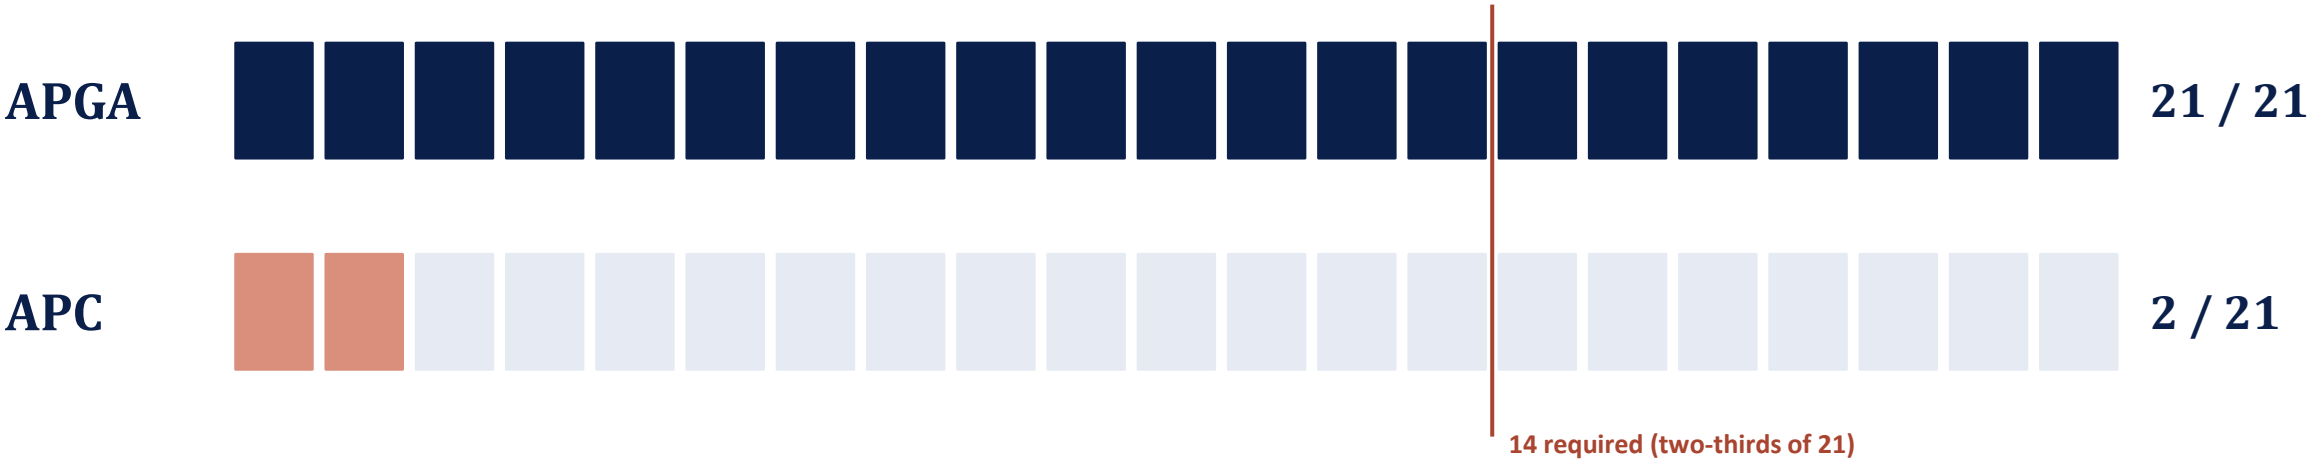

+1,797

issued ballots above registered voters

2,783,096 issued vs 2,781,299 registered. A physical-plausibility flag only; no regulation sets this rule.

The 25% spread requirement was met in every LGA — seven more than required.

LGAs WHERE EACH PARTY CLEARED 25%

55.0% – 83.7%

APGA's range across LGAs: Ayamelum (lowest) to Orumba North (highest).

Even setting the winning margin aside, the constitutional-spread requirement is satisfied with a wide margin. The identified defects do not put it in doubt — an outcome-materiality finding, reported separately from process integrity.

Institutional lessons: what this audit teaches beyond a single election.

01

A clean declaration is not a clean process

Discrepancies can enter the result chain early and stay hidden behind final-level reconciliation.

02

Legal compliance ≠ forensic integrity

A unit can pass the statutory over-voting test and still show unexplained changes in votes.

03

Collation is a critical integrity point

The dominant finding was party-vote alteration, with over-voting introduced at EC8B and unexplained reductions.

04

Technology strengthens evidence, not integrity

High BVAS and IReV coverage coexisted with discrepancies emerging during collation.

05

Accountability needs a traceable chain

Missing or undocumented records limit independent verification of what happened and why.

06

Integrity and materiality are separate tests

The existence of irregularities and their capacity to affect the outcome should be tested independently.

Recommendations to courts, parties, observers and partners.

COURTS & TRIBUNALS

- Assess disputed results across the BVAS → EC8A → EC8B → EC8C → EC8D chain.
- Distinguish irregularity from electoral impact.

POLITICAL PARTIES & AGENTS

- Strengthen scrutiny at collation centres, especially the EC8A–EC8B transition.
- Keep independent result records and reconcile figures up the chain.

OBSERVERS & RESEARCHERS

- Extend observation beyond voting day to the full result-production chain.
- Distinguish compliance, non-compliance and unassessable evidence.

DEVELOPMENT PARTNERS

- Support reforms in result reconciliation, collation transparency, correction audit trails and independent post-election audits.

Coverage & limits

WHAT THIS AUDIT CAN SUPPORT

Everything derived from BVAS, EC8A, EC8B, EC8C and EC8D: accreditation consistency, over-voting, arithmetic, collation reconciliation and forensic-integrity classification — all reproducible from the locked dataset.

WHAT IT CANNOT

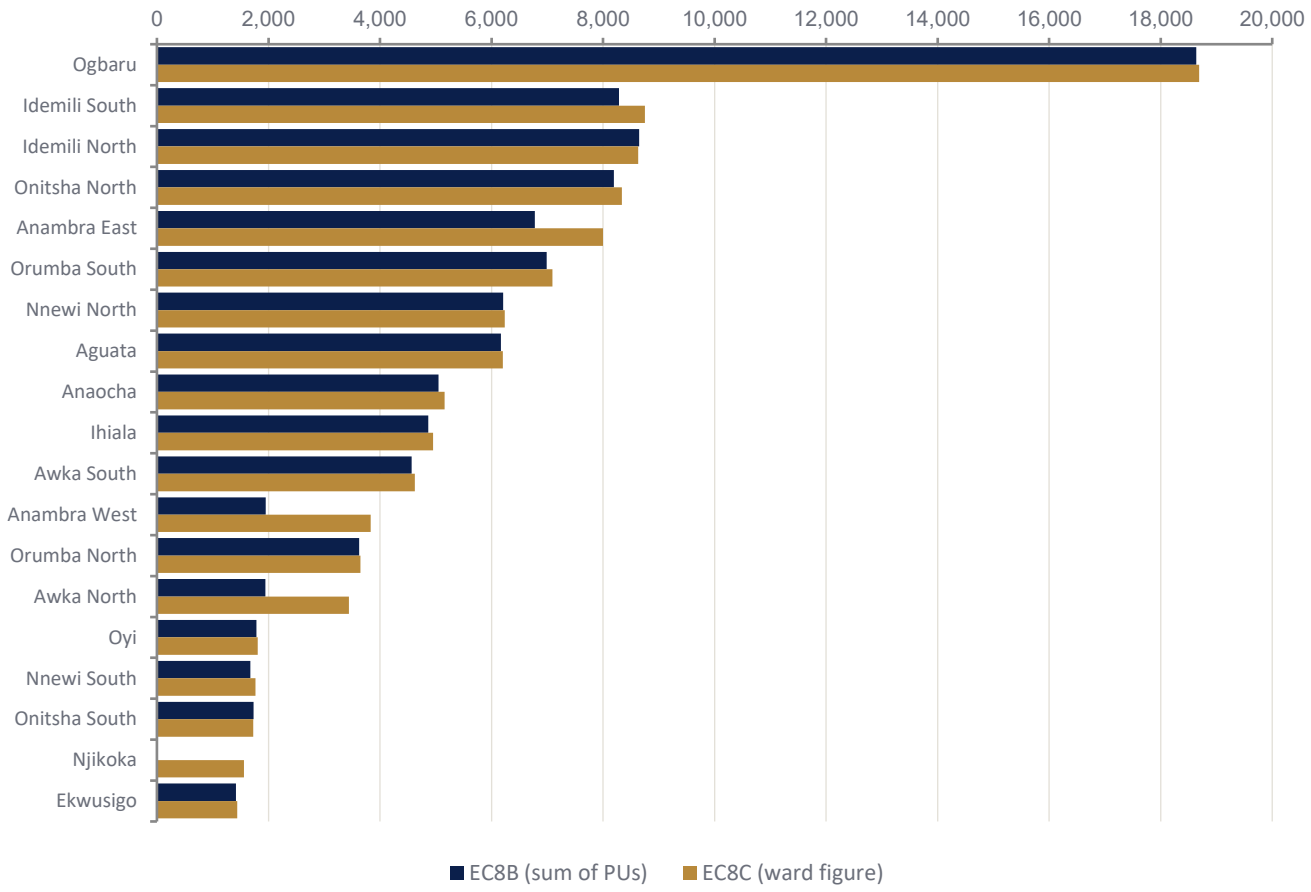

Ballot accounting (Pillar 2), because issued, spoilt and unused columns were not collated; and the administrative reason behind reconciled corrections where no record is held.

WHAT IT DOES NOT CLAIM

Intent, coordination or criminal conduct. The audit reports what the forms show and stops there.

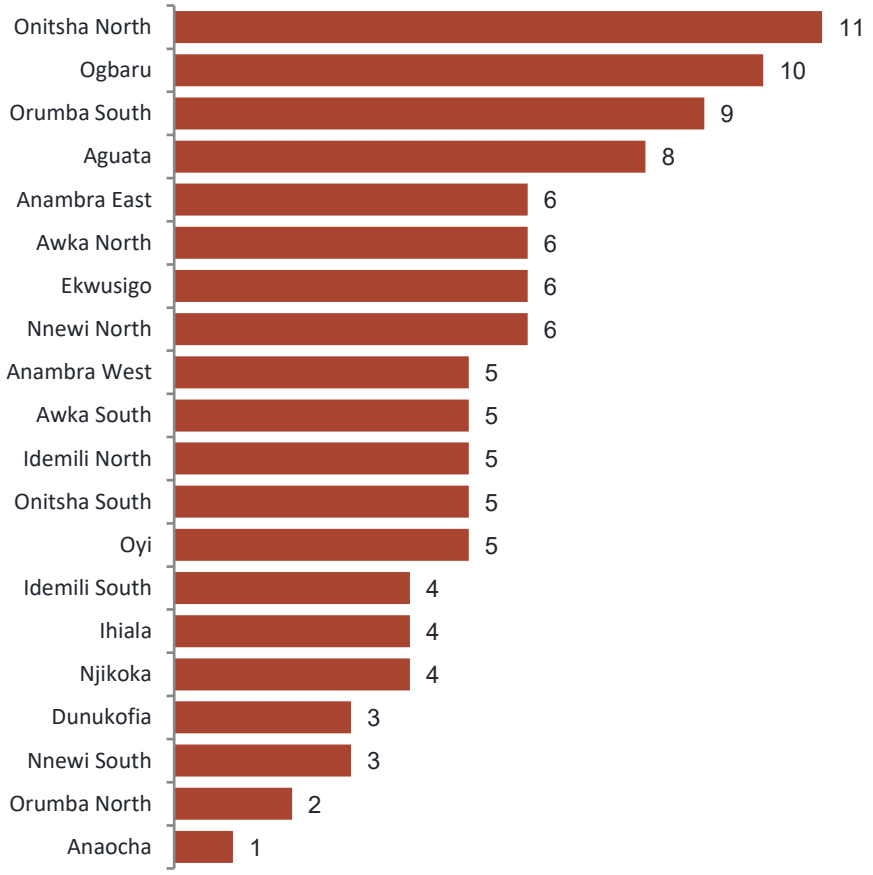

Where the non-reconciling wards sit.

Total votes in the 48 non-reconciling wards, by LGA: EC8B (sum of PUs) vs EC8C (ward figure)

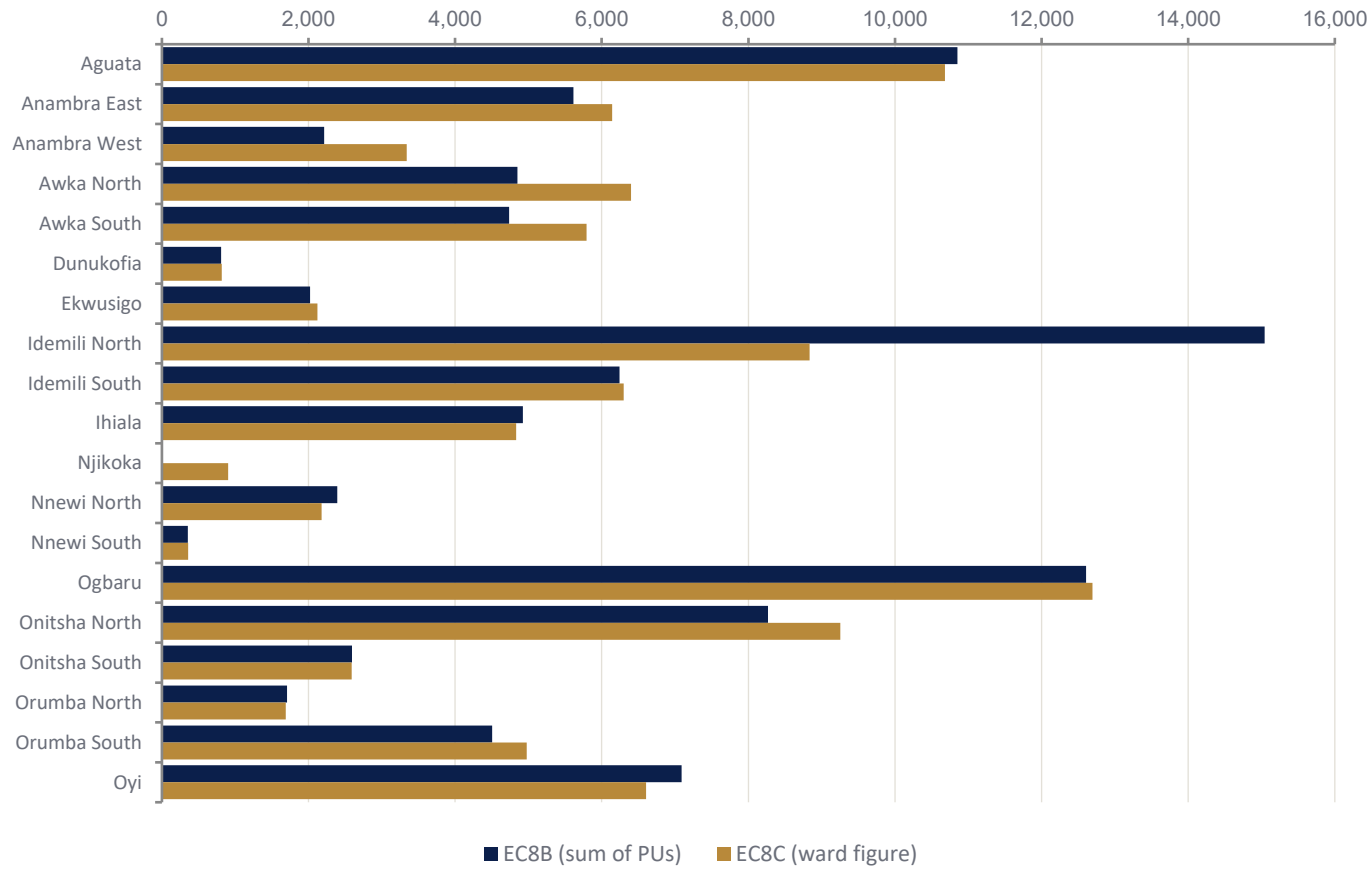

Njikoka EC8B: no PU sum recorded (shown as 0).

Wards failing party-vote reconciliation (108), by LGA

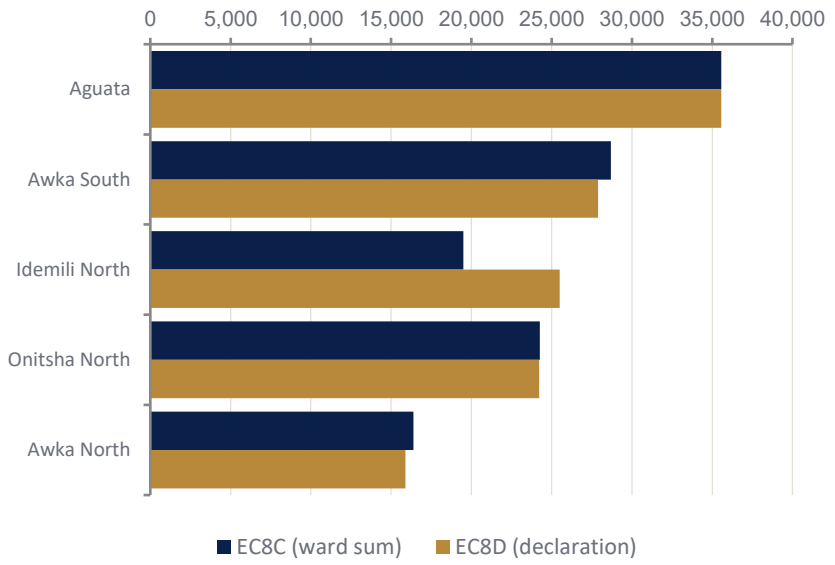

APGA: where the figure changed between levels.

Wards where APGA did not reconcile, by LGA — EC8B (sum of PUs) vs EC8C (ward figure)

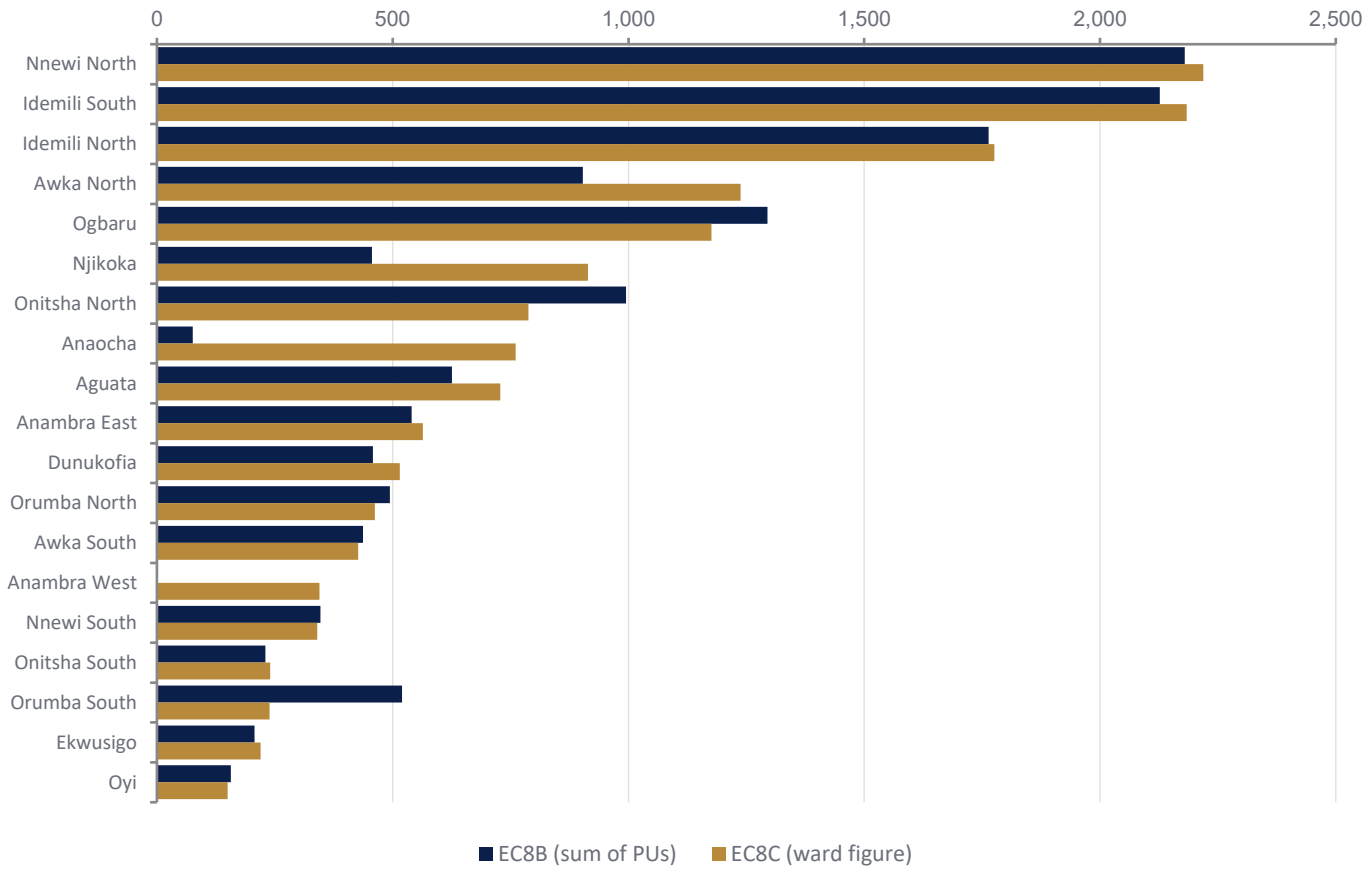

LGAs where APGA did not reconcile — EC8C vs EC8D

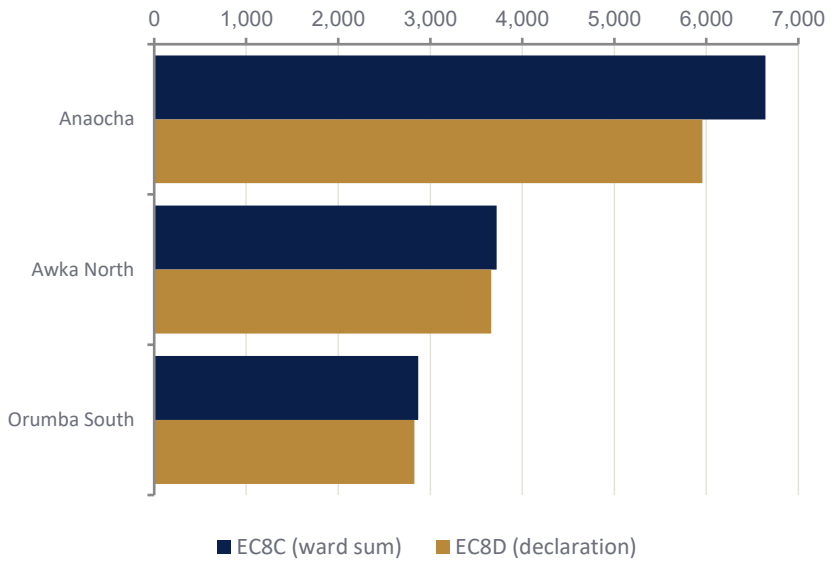

A zero bar means the source recorded no PU sum for that LGA or ward group; read it as missing, not as zero votes.

APC: where the figure changed between levels.

Wards where APC did not reconcile, by LGA — EC8B (sum of PUs) vs EC8C (ward figure)

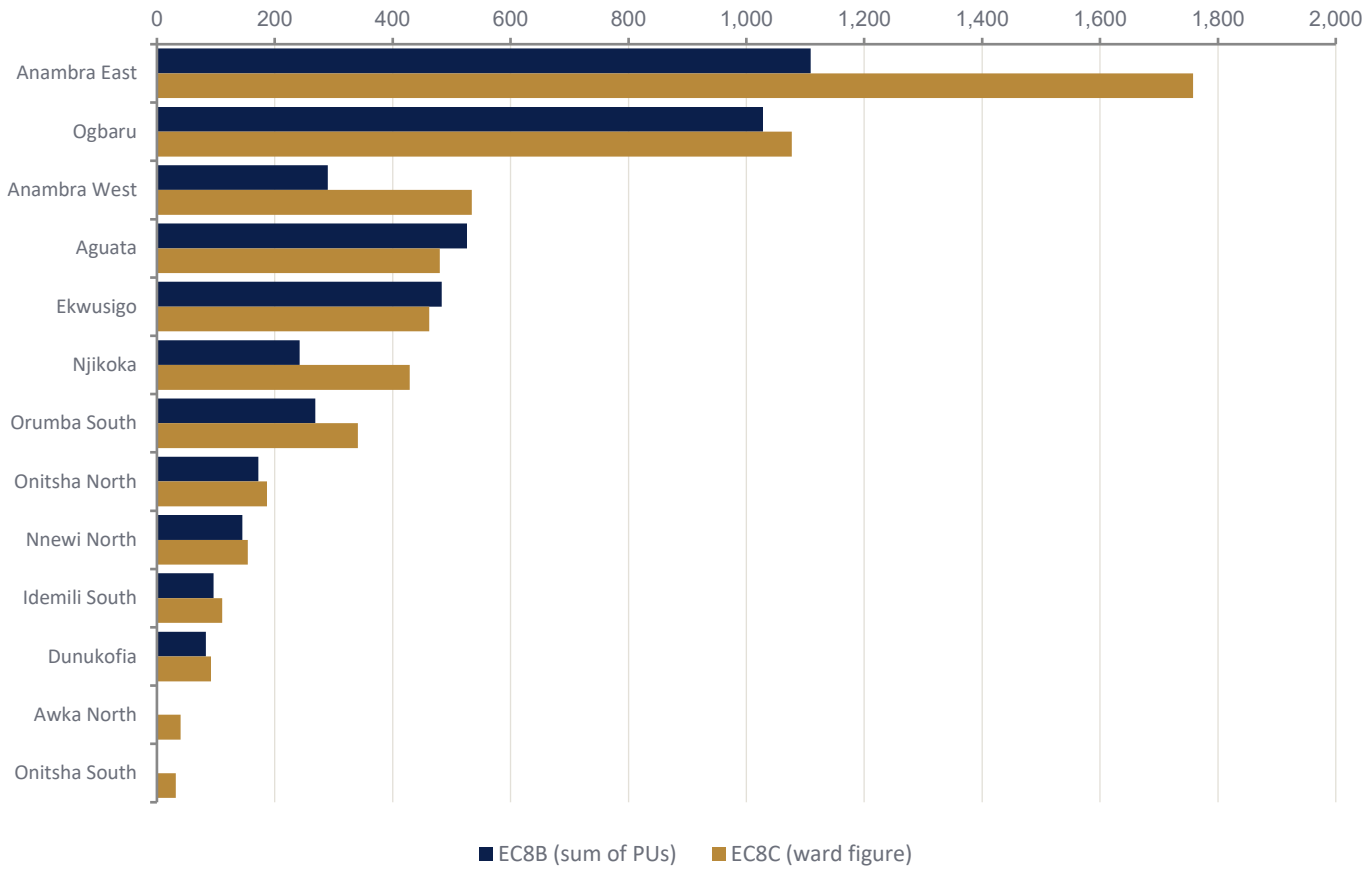

LGAs where APC did not reconcile — EC8C vs EC8D

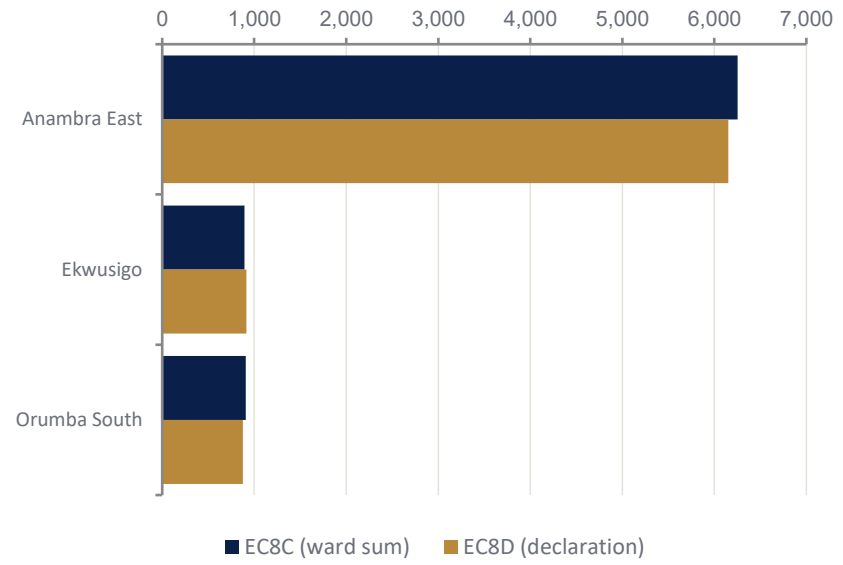

A zero bar means the source recorded no PU sum for that LGA or ward group; read it as missing, not as zero votes.

YPP: where the figure changed between levels.

Wards where YPP did not reconcile, by LGA — EC8B (sum of PUs) vs EC8C (ward figure)

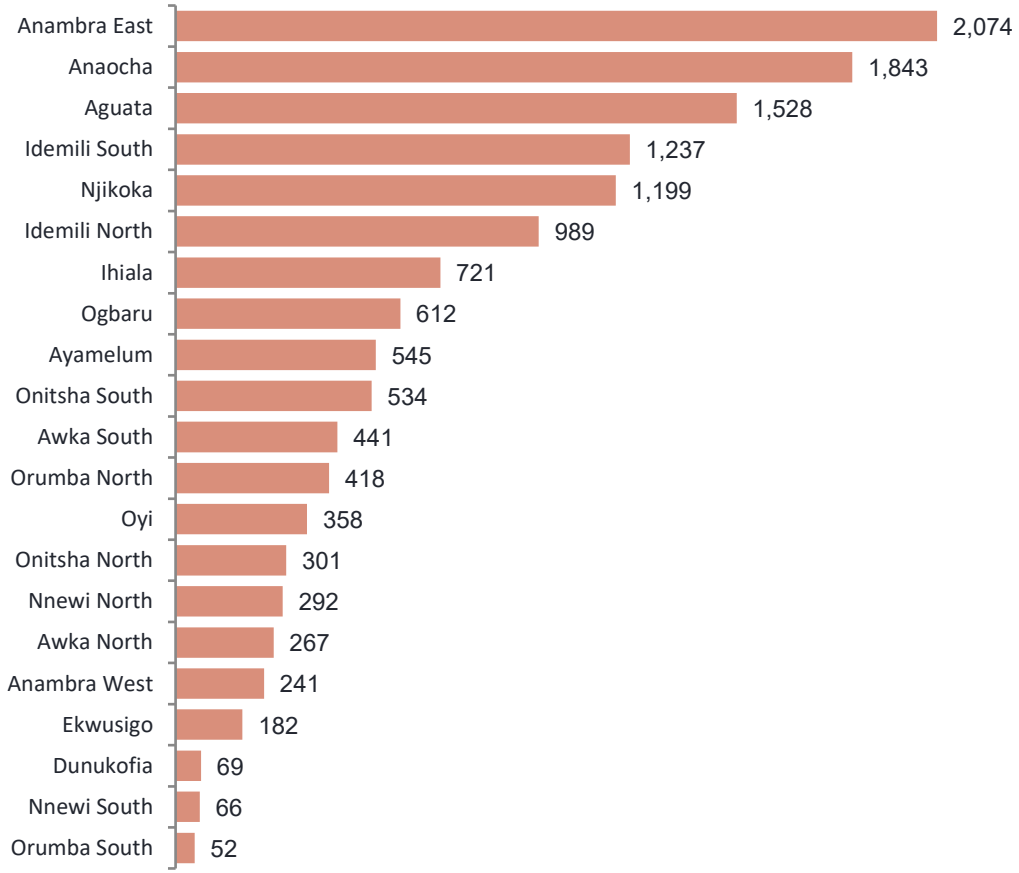

LGAs where YPP did not reconcile — EC8C vs EC8D

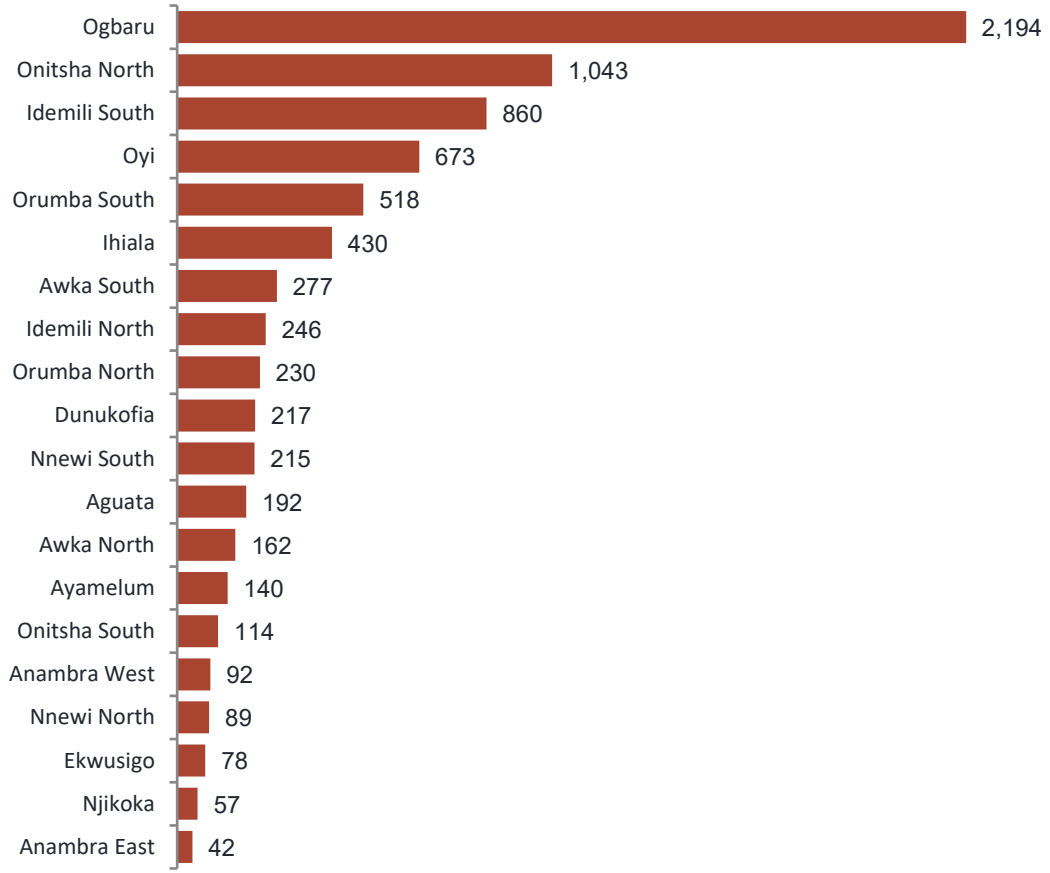

A zero bar means the source recorded no PU sum for that LGA or ward group; read it as missing, not as zero votes.

Over-voting and party-vote alteration, by LGA.

Excess votes over BVAS at EC8A, by LGA

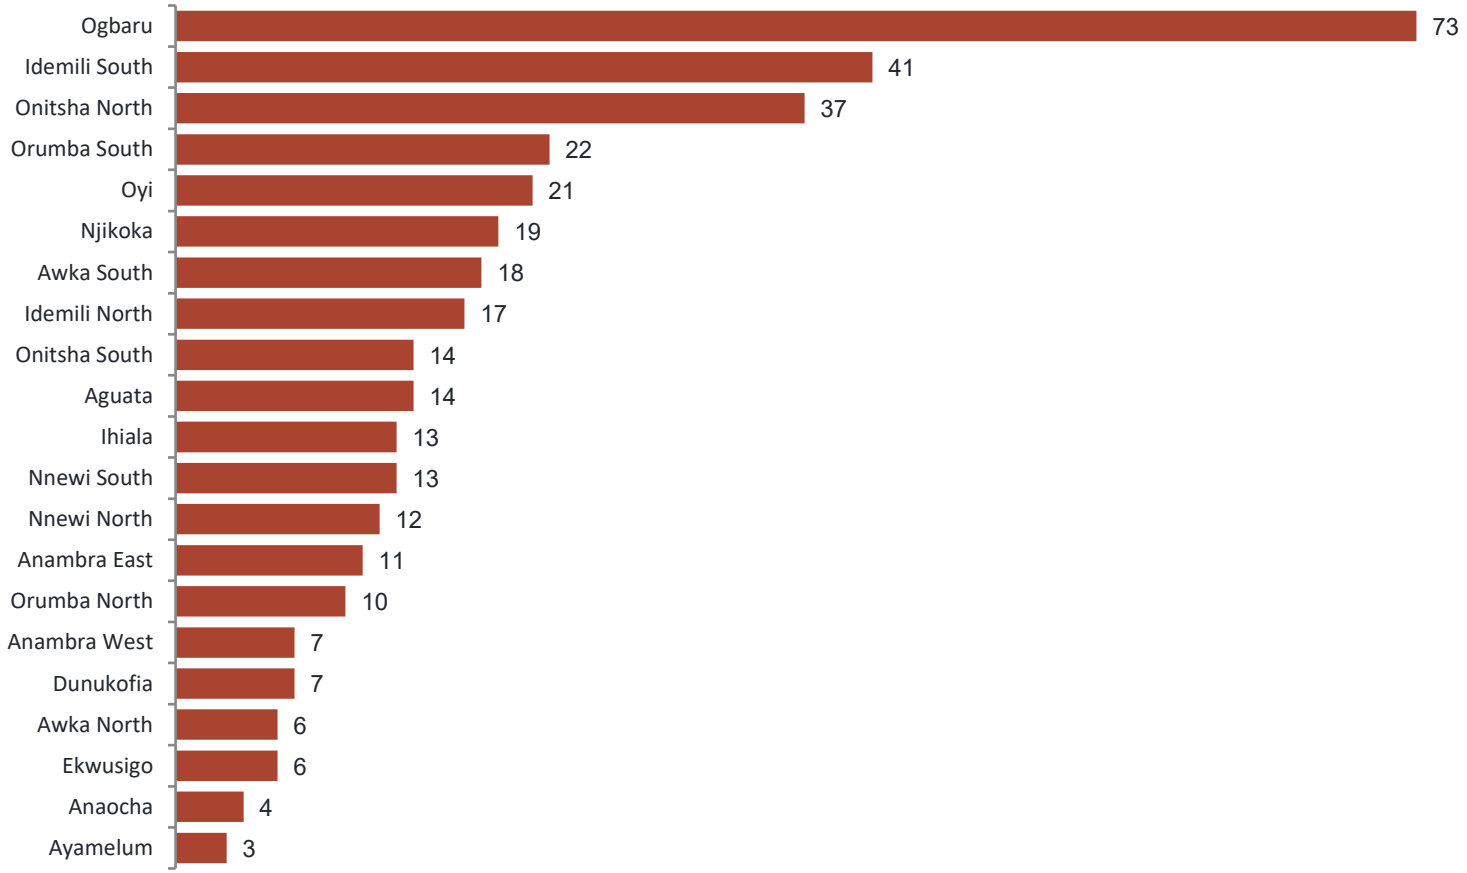

Votes moved between parties, EC8A → EC8B, by LGA

Non-compliant polling units by LGA (368 in total).

Non-compliant PUs by LGA

368 / 5,673

assessable PUs — 6.5%. Zone totals: North 93, Central 112, South 163.

LGA counts are not rates: PUs per LGA differ, so rate-based comparison is planned for the web Evidence Register.
